

User Training Schedule and Awareness Programme

Annual training calendar and ongoing awareness activities

Deliverable 5 of 6

1. Programme Objectives

The training programme builds an organisation-wide habit of email security awareness. The goal is not just one-time learning but a continuous reinforcement so that secure behaviours become routine.

2. Annual Training Calendar

Quarter	Topic	Duration	Target Audience
Q1	Email Security Basics and Phishing Awareness	1 hour	All employees
Q2	Encryption, Digital Signatures, MFA Setup	1.5 hours	Knowledge workers
Q3	Advanced Threats - BEC, Whaling, Wire Fraud	2 hours	Managers and Finance
Q4	Incident Response Drill and Lessons Learned	2 hours	All employees

3. Ongoing Awareness Activities

- Monthly phishing simulation - automated mock phishing emails sent to all staff, with metrics on click-through and reporting rates
- Weekly security tip - one-page bulletin emailed to all staff, covering current threats and reminders
- Quarterly newsletter - longer-form content with case studies from real breaches and lessons learned
- Security champions programme - one volunteer from each department acts as a local point of contact for security questions
- Annual phishing awareness week - posters, lunch-and-learn sessions, and interactive games

4. Onboarding Requirements

Every new employee must complete the following within their first week:

- Mandatory 1-hour email security orientation session
- MFA setup on all corporate accounts
- PGP key generation (for technical staff) or S/MIME certificate enrolment (for executives)
- Acknowledgement of Email Security Policy (see Deliverable 6)
- Phishing simulation as part of the orientation

5. Compliance and Metrics

Training attendance and effectiveness will be tracked through the following KPIs:

- Attendance rate per quarterly session (target: 95% or higher)
- Phishing simulation click rate (target: under 5% within 12 months)
- Phishing report rate (target: 70% of simulated phishing reported by employees)
- Average time to report suspicious emails (target: under 30 minutes)
- Repeat-clicker tracking - employees failing 3+ simulations get targeted retraining

6. Programme Ownership

The Information Security team owns the training programme overall. HR coordinates scheduling and attendance tracking. Department heads are accountable for ensuring their teams complete the required sessions on time.
